

Take the Complexity Out of EUDR Compliance. Build Trust with Proof.

Ensure Deforestation-Free Imports into the EU backed by evidence

EUDR.Supply, powered by Morpheus.Network, is your all-in-one platform for EU Deforestation Regulation (EUDR) compliance. It simplifies how you collect, verify, and submit the evidence regulators require, while addressing the real-world challenges of exporting and importing into the EU. Gain complete visibility and control, even when sharing sensitive data up and down the supply chain, or with unknown and future trading partners.

Powered by Confidios Digital Product Passports

At the core of EUDR.Supply is the Confidios Digital Product Passport, a secure, tamper-proof digital record that travels with the product through the supply chain and contains all the evidence needed for compliance. It enables seamless, permissioned sharing of data across the supply chain while keeping sensitive information protected and under control. This approach makes compliance continuous, transparent, and verifiable, building trust from origin to end market.

The Growing Challenge of EUDR Compliance

With the EUDR now in force, companies must do more than prove products are deforestation-free. They must provide verifiable, geo-linked evidence and traceability back to origin. The real complexity lies in:

01

Sharing sensitive data (e.g. producer labour law compliance, legality of land use, tax compliance, etc.) up the chain, where visibility is limited and trust is fragile

02

Providing that information to unknown or future trading partners, especially after the product enters the EU market ("post-gate")

03

Ensuring ongoing, time-stamped compliance and not just a one-off declaration

04

Meeting digital traceability and due diligence reporting demands without introducing massive overheads or risk

How EUDR.Supply Solves These Challenges

Key capabilities that power your compliance:

Automated Due Diligence

Statements: Generate and manage reports with ease.
✓ Save time, reduce admin, and meet TRACES deadlines with confidence.

Supply Chain Mapping:

Track every material back to its source.
✓ Prove origin, surface hidden risks, and ensure accountability at every tier.

Risk Assessment Tools:

Spot and act on risks before they become violations.
✓ Stay proactive with early warning tools built for compliance.

Deforestation Monitoring:

Verify deforestation-free claims using satellite imagery.
✓ Add independent, time-stamped proof that stands up to audits.

Supplier Management:

Keep supplier documents, certifications, and compliance status in one place.
✓ Manage data securely, maintain confidentiality, and remain audit-ready.

Reporting & Analytics:

Generate internal and compliance reports in seconds.
✓ Eliminate spreadsheet chaos and demonstrate compliance instantly.

The Real Benefit

Clarity, Not Complexity

No more chasing paperwork or managing risk in silos, just one seamless, secure process from source to report.

Evidence That Stands Up to Scrutiny

Immutable data trails that prove what you've promised, instantly.

Trusted Sharing, On Your Terms

Enable smart, secure permissioning so sensitive data flows only when, and to whom it should.

Let Evidence Be Your Advantage

Stay ahead of EUDR enforcement and earn trust across your supply chain.

Digital Product Passports: The Backbone of EUDR.Supply

Why Digital Product Passports Matter

Against a backdrop of growing regulation and scrutiny, trust must be built on verifiable evidence and not assumptions. Confidios Digital Product Passports (DPPs) are at the heart of EUDR.Supply, enabling a smarter, more secure way to prove compliance and build trust across the supply chain.

The Confidios Digital Product Passport (DPP) is a secure, portable record that travels with the product and encapsulates all necessary supply chain evidence to prove every product's compliance journey from origin to EU entry.

These passports ensure that key compliance data stays accessible, up to date, and under control, no matter how many times a product changes hands. Built with Confidios' trusted credential and permissioning technology, each DPP becomes your single source of truth: a secure, shareable asset that regulators can verify instantly, and you can control with precision, deciding who sees what, when, and why.

What Makes This Approach Different

Trusted Credential Containers (TCCs)

Each passport is built with Confidios' Trusted Credential Containers™, tamper-proof data bundles that store independently verified evidence. These aren't just static records; they are cryptographically sealed packages that include:

Legality
evidence

Geolocation
evidence

Satellite
verification

Due
diligence
declarations

Certification
evidence
and more

The result: every data point can be trusted because it has been checked, time-stamped, and locked in.

Smart, Granular Permissioning

One of the biggest challenges with EUDR compliance is sharing sensitive data, especially when dealing with unknown upstream partners or future product owners. Our passports solve this with data-level permissioning powered by Confidios Self-Sovereign Data™.

Unlike traditional systems where data is handed over and copied, this approach treats data as self-sovereign: it stays where it was created and is accessed only with permission; not duplicated or passed around. With permissions set by data owners, the data knows exactly who it can be shared with and who can see what, when and why. Only the right parties get access to the right information, with no overexposure or compliance risks.

This protects confidentiality and eliminates the fragmentation and inconsistencies of email chains, spreadsheets, or file-sharing platforms.

What You Gain

Prove Compliance, Instantly

Share tamper-proof, verifiable evidence that regulators and partners can trust. No second-guessing, no repeated validation.

Protect Sensitive Information

Control exactly what's shared, with whom, and when, keeping confidential data secure while remaining fully auditable.

Streamline Supplier and Buyer Interactions

Accelerate onboarding, simplify due diligence, and reduce friction across your supply chain.

Stay Traceable, Even After Import

Your Digital Product Passport travels with the product, maintaining traceability even after initial import, making resale or further trade easier within the EU.

What Sets EUDR.Supply Apart

EUDR.Supply, powered by Confidios Digital Product Passports, gives you more than just a compliance tool. It delivers lasting confidence in every trade. Backed by verifiable proof, smart data-level permissioning, and traceability that extends beyond EU import, it's how modern supply chains stay compliant, connected, and credible.
